

How Promethean Labs Works

Promethean Labs partners with organizations to design and build high-impact software prototypes. We specialize in early-stage validation, AI-enabled systems, and technical proof-of-concept work. Our engagements are intentionally structured to move fast while maintaining clarity, accountability, and trust.

Our Process: 1. Discovery – Define the problem and approach. 2. Proof of Concept – Validate feasibility. 3. Prototype – Build a working internal system. 4. Extensions – Optional enhancements via change orders.
